

Investment Objective

The Fund's investment objective is to achieve long term capital growth by investing in global equity markets.

Risk Indicator Definition

In addition to the risk captured by the indicator, the overall Fund value may be considerably affected by: market risk, liquidity risk, investment risk, currency risk, derivatives risk, counterparty risk, common stocks risk and concentration risk.

RISK INDICATOR

ANNUALISED PERFORMANCE (%)

CUMULATIVE PERFORMANCE

MARKET COMMENTARY

The fund returned 0.84% for the month, underperforming the benchmark by -0.52%. The MSCI ACWI Index rose 1.36%, with the biggest gainers being China and the US, increasing 4.8% and 2.3% respectively. The MSCI Emerging Markets Index increased 1.95% driven by gains in Thailand, Turkey and Taiwan, increasing 14.3%, 5.6% and 5.4% respectively (all in USD).

US equities rose 2.3% in July, marking the third consecutive monthly gain following a strong rebound from earlier tariff-related volatility. The S&P 500 gained 2.2%, while the Nasdaq rose 2.4%. The rally was driven by a stronger-than-expected Q2 GDP growth estimate of 3%, alongside easing geopolitical tensions and continued strength in corporate earnings, which further supported market sentiment. Inflation data released during the month showed CPI rising 2.7% year-on-year from 2.5% in May as pricing pressure from higher tariffs started to reflect in prices. Meanwhile, the labour market showed signs of cooling, with nonfarm payrolls increasing by just 73,000, well below expectations of 110,000, and the unemployment rate ticking up to 4.2%. The Federal Reserve has held its policy rate steady and unchanged since December 2024. In Europe, equities declined 1.8%, with the weakness attributed to underperformance in the Netherlands and Germany, declining 6% and 1.8% respectively. Eurozone Q2 GDP grew just 0.1% quarter-on-quarter, with contractions in Germany and Italy, and only modest growth in France and Spain. The unemployment rate held steady at 6.2%, and the European Central Bank opted to pause rate cuts, keeping rates at 2% after 8 consecutive reductions. Emerging Markets saw notable strength. Thailand surged 14.3%, driven by strong investor sentiment, declining inflation and favourable macro tailwinds. Turkey gained 5.6%, extending its rally, supported by a decline in inflation, central bank rate cuts, and improving policy credibility under the new cabinet. Taiwan rose 5.4%, buoyed by Q2 GDP growth of 7.96% year-on-year, fuelled by strong semiconductor export demand.

On a sector level, Healthcare and Consumer Staples were the worst-performing sectors over the month. The fund's underweight in Consumer Staples added to relative performance, while the overweight in Healthcare detracted from performance. Information Technology was the best-performing sector over the month, which detracted from relative performance. The fund's overweight in Consumer Discretionary, as well as stock-picking in the Consumer Services sector, added to relative performance.

Notable portfolio actions during the month included initiating new positions in Tencent, Remy Cointreau, Moncler and Demant. The existing position in Berkshire Hathaway and Coca-Cola were topped up, while the holdings in Reinet, Eli Lilly and AMD were sold. Exposure to Chinese e-commerce names was reduced through trimming JD.com and Pinduoduo, while the positions in Evolution and Samsung Electronics were trimmed following strong share price performances after their results. Notable contributors to fund performance were positions in Evolution AB (+46bps absolute and relative), Alphabet (+42bp absolute and +22bps relative) and Microsoft (+35bps absolute and +5bps relative). Notable detractors from performance over the month came from Centene Corp (-34bps absolute and -32bps relative), Kaspi (-31bps absolute and relative) and Novo Nordisk (-25bps absolute and -18bps relative).

The fund is positioned with an underweight in cyclical names, in favour of EM technology exposure. From a geographical perspective, the fund remains underweight in the US and Canada, while being overweight in Kazakhstan and China.

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Performance Fee Cap: The maximum performance fee that can be charged over a specified period

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 14:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. The Fund are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

For any additional information such as fund prices, brochures and application forms please go to www.prescient.ie. Copies of the Prospectus and the annual and half yearly reports of the Company" are available in English and may be obtained, free of charge, from Prescient Fund Services (Ireland) Limited (the "Manager") at 49 Upper Mount Street, Dublin 2, Ireland or by visiting www.prescient.ie. Copies may also be obtained directly from Fairtree Asset Management (Pty) Ltd (the "Investment Manager")

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

Regulation 28 is issued under the Pension Fund Act.
