

Investment Objective

The Fund's investment objective is to achieve long term capital growth by investing in global equity markets.

Risk Indicator Definition

In addition to the risk captured by the indicator, the overall Fund value may be considerably affected by: market risk, liquidity risk, investment risk, currency risk, derivatives risk, counterparty risk, common stocks risk and concentration risk.

RISK INDICATOR

ANNUALISED PERFORMANCE (%)

CUMULATIVE PERFORMANCE

MARKET COMMENTARY

The fund declined by 8.09% for the month, underperforming the benchmark by 0.91%, while the MSCI ACWI Index fell by 7.18%. Returns were negative across all regions, with both Germany and Japan among the weakest performers, each declining by 12.4% over the period. (all figures in USD)

US equities declined sharply in March, falling 4.9% as markets contended with a sharp rise in geopolitical risk following the outbreak of the US and Iran war. The conflict resulted in the closure of the Strait of Hormuz, lifting oil prices materially during the month and adding to concerns around inflation, growth and financial conditions. The shock weighed on global sentiment and drove a broad-based de-risking across equity markets. Against this backdrop, the Federal Reserve left rates unchanged in March, while signalling caution around the inflationary impact of higher energy prices and the downside risks to growth should the conflict endure. US macroeconomic data released during the month also pointed to a softening backdrop, with the unemployment rate rising to 4.4% in February, while CPI remained at 2.4% year on year. At the same time, the rotation already underway in markets continued into March, with software and other AI-linked areas again among the hardest hit as investors reassessed valuation levels, competitive positioning and the durability of long-term earnings expectations. Market behaviour has remained heavily influenced by rapid advances in AI, which have increased uncertainty around long-term growth, competitive dynamics and valuation assumptions. European equity markets fell sharply in March, declining 9.9%, as the deterioration in global risk sentiment weighed heavily on the region. Eurozone inflation rose to 2.5% year on year in March, up from 1.9% in February, while core inflation eased slightly to 2.3%. Against this backdrop, the ECB kept its key policy rates unchanged in March, maintaining the deposit rate at 2.0% as policymakers assessed the implications of higher energy prices and a more uncertain growth backdrop. Europe is very exposed to the disruption of natural gas flow from the Middle East. To make matters worse, European natural gas storage was seasonally low when the conflict started, further impacting their economies.

At the sector level, Energy was the only positive sector over the month; however, the fund's underweight exposure detracted from relative performance. Although we added to Energy exposure throughout the month, we entered the year underweight due to the oversupplied oil market. The fund's overweight exposure to Consumer Discretionary, Communication Services, and Information Technology detracted from relative performance; however, underweight exposure to Industrials and stock picking in the Financial sector added to relative performance.

Portfolio activity during March reflected a deliberate increase in exposure to energy, where new positions were initiated in BP, TotalEnergies, Shell and Equinor as we sought to capture the improving outlook for oil and gas producers amid higher energy prices and rising supply risk. The existing positions in British American Tobacco and Colgate-Palmolive were exited at good levels. Within PGMs, we rotated exposure by adding to Impala and Northam while exiting Valterra, after their outperformance despite higher oil dependence in their open-pit mines. A new position was also initiated in UBS Group.

Notable contributors to fund performance were positions in JD.com (+15bps absolute and +14bps relative), Kaspi (+12bps absolute and relative) and BP (+10bps absolute and +7bps relative). Notable detractors from performance over the month came from Impala (-55bps absolute and -54bps relative), TSMC (-41bps absolute and -18bps relative) and Meta (-40bps absolute and -23bps relative). The fund is positioned with an underweight in cyclical names, in favour of technology exposure. From a geographical perspective, the fund remains underweight North America, while being overweight Kazakhstan and South Africa.

Glossary

Annualised Performance: Annualised performance shows longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest Performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Sortino Ratio: A measure of the risk-adjusted return of a portfolio. It is a modification of the Sharpe ratio but only penalises the returns falling below a user specified target, or required rate of return, while the Sharpe ratio penalises both upside and downside volatility equally.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Performance Fee Cap: The maximum performance fee that can be charged over a specified period

Specific Risk

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives Risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) Risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment Risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest Rate Risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property Risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency Exchange Risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector Risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative Counterparty Risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity Risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity Investment Risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Disclosure

The portfolio has adhered to its object and there were no material changes to the composition of the portfolio during the quarter.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 14:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. The Fund are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

For any additional information such as fund prices, brochures and application forms please go to www.prescient.ie. Copies of the Prospectus and the annual and half yearly reports of the Company" are available in English and may be obtained, free of charge, from Prescient Fund Services (Ireland) Limited (the "Manager") at 49 Upper Mount Street, Dublin 2, Ireland or by visiting www.prescient.ie. Copies may also be obtained directly from Fairtree Asset Management (Pty) Ltd (the "Investment Manager")

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

Regulation 28 is issued under the Pension Fund Act.
